Summary

Computer Science student at VIT who likes working through data problems end to end, from pulling and cleaning the data to building the analysis, testing hypotheses, and explaining what the numbers mean for a decision. Comfortable in Python and SQL, and used to working independently on a problem before bringing it to a clear, presentable answer. Interested in applying statistical analysis and forecasting to real business questions.

Education

Vellore Institute of Technology — Chennai, Tamil Nadu
B.Tech in Computer Science and Engineering, GPA: 8.4 — *2023 – 2027*

Experience

Research Consultant — June 2026 – Present
WorldQuant — *Remote*

- Achieved Gold Level on WorldQuant Brain — built and validated forecasting signals from live financial datasets, testing hypotheses and identifying predictive features through statistical analysis
- Ranked 6th nationally and 26th in the International Quant Championship, competing across quantitative modelling and financial problem-solving rounds

Full Stack Intern — July 2025 – Sep 2025
Mindmach Technologies Pvt. Ltd. — *Remote*

- Built data pipelines on AWS to extract and process data from multiple sources, feeding downstream analysis and cutting down manual handling
- Worked across the stack with React.js and REST APIs, structuring data flows end-to-end from ingestion to frontend consumption

Technical Skills

- **Programming Languages:** Java, Python, SQL, C
- **AI/ML:** TensorFlow, PyTorch, NLP, Semantic Search, RAG pipelines, LLMs, OpenCV
- **Data Analysis & Visualization:** Statistical Modeling, Hypothesis Testing, Tableau
- **Databases:** PostgreSQL, MySQL, Supabase
- **Cloud and DevOps:** AWS, Git
- **Additional:** Data structures and algorithms, System design, OOPs, Operating systems, Computer Network

Projects

Semantic Search & Query Retrieval System | **Python, FastAPI, NLP, Vector Embeddings** — Trademarkia

- Built a retrieval system using vector embeddings and fuzzy topic clustering on the 20 Newsgroups dataset; wrote a semantic cache that matches queries across paraphrase variations

Data Redaction Tool | **Python, OpenCV, Flask, PostgreSQL**

- ML-based automation tool that detects and redacts PII from documents; Flask backend stores redaction policies and audit logs in PostgreSQL

Complex Mapping Visualizer | **JavaScript, Canvas API, Complex Analysis**

- Interactive browser tool for visualizing $w = f(z)$ transformations in real time; draw on the z-plane and watch conformal mappings (sin, exp, Möbius, Joukowski) render on the w-plane

AI Chrome Extension | **JavaScript, Chrome Extensions API**

- Browser extension that turns any input field into a chat interface, automating prompt generation from clipboard content

webv - Debian Package | **C, Makefile**

- Built a lightweight Debian system package that provides an instant CLI-to-GUI browser launcher for quickly opening web content from terminal workflows

Achievements and Leadership

- Selected among top **1.9%** nationally for **Amazon ML Summer School 2026** — learning advanced ML concepts like deep learning and generative AI
- Selected for **Visteon Scholar Programme** (Jan–Apr 2026) — learned automotive embedded systems.
- Won first place in the IQAC Quality Week 2025 Hackathon — built a student recruiter platform with an AI interview simulator, forum, and job portal
- 1st-author chapter "Integrated Multimodal Redaction Architecture With Reversible Cryptographic Obfuscation" accepted for publication in *Managing Sensitive Health Data Through Federated Learning and Generative AI* (IGI Global)

Certificates

- AWS Certified Solutions Architect – Associate – **AWS**
- Programming for Everybody – **University of Michigan**
- Python for Data Science, AI and Development – **IBM**
